01. /Executive Summary

We have completed a comprehensive review of the Hadassah Shoulder Unit website. The primary goal was to simplify the patient journey from symptom discovery to appointment booking.

01. /Navigation Strategy

The current navigation is overly clinical. We recommend a “Symptom-First” approach to reduce friction for elderly patients.

Information Overload on Homepage

[High]

The homepage contains 14 different CTAs, leading to decision paralysis. We recommend reducing this to 3 primary paths.
