Voria (Placeholder) Digital Transformation — Project Proposal

// client: Guillermo

// 2026-05-21

// CONFIDENTIAL

01. /executive_summary

Guillermo is building a new kind of consultancy — one that doesn't leave transformation plans in a drawer. Voria is engineered specifically for the Spanish SME market (5–50 employees), targeting knowledge-intensive sectors like Law, Compliance, Accounting, and Healthcare-adjacent services. The strategic partnership with Rapinformes S.L. — a 35-year compliance firm with 7,000 clients — provides the institutional trust that conservative sectors demand before opening the door.

Left without a distinctive brand identity, custom web presence, and clear market positioning, Voria risks being swallowed by the 150+ generic digital consultancies already operating in this space. The window is narrow: the founding partnership with

Rapinformes creates a credibility moat, but only if the market perceives Voria as a premium, differentiated player from day one.

Our approach delivers the complete digital foundation — from strategic naming and visual identity to a fully coded, high-performance website — in a compressed 5-week sprint. Rather than handing over a PDF brand guide and walking away, we embed the brand into working code, live infrastructure, and professional collateral that Guillermo can deploy immediately.

The outcome: By July 5th, Guillermo will have a market-ready brand identity, a live high-performance website on a custom domain, a comprehensive brand kit extending to all professional touchpoints, and the technical infrastructure to begin client acquisition through Rapinformes' existing network of 7,000 contacts.

02. /win_themes

These are the strategic pillars that run through every section of this proposal. Each theme connects a specific capability of ours to a specific need of Guillermo's.

Strategic Decision

High Impact

Avoid the "generic consultant" trap through strategic brand differentiation

Buyer Need: The Spanish market has 150+ competing digital transformation firms. Without sharp positioning, Voria will be perceived as another generic consultancy despite its unique AI Readiness methodology and Rapinformes partnership.

Our Differentiator: We deliver strategic naming research and 2 distinct brand directions — not template logos — with copywriting that positions the "AI Readiness" angle as a market differentiator, not a buzzword.

Strategic Decision

High Impact

Launch a technically superior web presence that converts referrals into clients

Buyer Need: Voria needs more than a brochure site. The website must function as a "digital business card" that converts warm referrals from Rapinformes' 7,000-client network into consultancy engagements.

Our Differentiator: We build lightweight, secure HTML5/CSS3/JS sites with zero recurring hosting costs (GitHub Pages), sub-second load times, and SEO-optimized architecture — not bloated WordPress installs that become security liabilities.

Strategic Decision

High Impact

Deliver a complete brand system — not fragments — in 5 weeks

Buyer Need: Guillermo operates under a "High Creative Latitude" model and needs a partner who delivers finished, well-reasoned directions rather than requiring micro-management. The timeline is fixed: Rapinformes is waiting.

Our Differentiator: Our 2-person team (Strategy + Creative Direction) operates as an integrated unit. Tal handles technical architecture, copywriting, and web development. Yaeli handles visual identity and aesthetic rigor. No handoff delays, no committee reviews.

Proof Point: Our end-to-end engagements compress what typical agencies deliver in 12-16 weeks into a 4-5 week sprint with weekly milestone reviews.

03. /understanding

Act I — We understand your world.

Before proposing a solution, we need to demonstrate that we have done the work to understand Guillermo's situation — not from a textbook, but from listening.

Your Current State:

Guillermo is building Voria as a boutique consultancy that targets a very specific gap in the Spanish market: SMEs with 5-50 employees who need genuine digital transformation; not slide decks, but embedded technical implementation that makes their operations AI-compatible. The founding insight is sharp: most consultancies sell "digitalization" as a concept, but Voria's methodology audits the entire digital operation, fixes infrastructure gaps, and only then integrates AI agents. This is a real differentiator; if the market can see it.

The strategic foundation is strong. Rapinformes S.L. — 35 years in the compliance industry, 7,000 active clients — has come in as a 10% equity partner and Voria's first client. This is rare institutional backing for a new venture. It means Voria doesn't need to cold-sell trust from zero; the trust is inherited. But inherited trust has a shelf life. It needs to be converted into visible, tangible brand authority before the market window closes.

The "High Creative Latitude" operating model tells us something important about how Guillermo works: he sets strategic direction and expects professional-grade execution with minimal back-and-forth. This means our deliverables need to arrive as finished, defensible directions — not rough drafts that require three more rounds of alignment.

The Central Tension:

Without a differentiated brand, Voria is invisible. There are 150+ digital transformation consultancies in Spain. Most of them say the same things. Most of them look the same. If Voria launches with a generic logo, a template website, and commodity positioning, the Rapinformes partnership becomes a wasted asset — warm referrals land on a site that looks like every other consultancy, and the conversion dies. The cost of a mediocre launch is not just lost revenue — it's lost credibility with a partner who staked their reputation on the recommendation.

04. /solution_journey

Act II — How we get you there.

This is not a feature list. This is a guided walkthrough of the decisions we will make together, in sequence, to move from current state to a market-ready digital presence.

Phase 1: "Brand Foundation & Strategic Naming" — Week 1 (June 1–7)

We begin with the work that most agencies skip: strategic research. We explore naming candidates, define the target audience with precision, and establish a brand voice that separates Voria from the generic "digital transformation" noise. At the end of Week 1, we present two distinct brand/naming directions — each fully reasoned, each defensible — for Guillermo's strategic choice. This is where Win Theme 1 does its work: differentiation is designed, not decorated.

Phase 2: "Full Brand Kit & Visual Identity" — Weeks 2–3 (June 8–21)

With the strategic direction locked, we develop 2 complete branding options: logo suite (primary, secondary, variations), color palette, typography system, visual language, and the comprehensive brand guidelines document. In parallel, Yaeli develops the visual identity while Tal develops the copywriting assets — tone of voice, brand personality, philosophy & values, and target audience definition. Week 3 closes with the second client meeting: presentation of both options and handover of the full branding kit.

Phase 3: "Web Development & Brand Applications" — Week 4 (June 22–28)

This is the heaviest phase. We deliver the functional coded website (HTML5/CSS3/JS), the SEO report and content strategy, the complete UI/UX design system, and the additional brand applications (business cards, LinkedIn banners, email signatures). The website is architected around four questions the visitor needs answered: Who are you? What do you do? Who is it for? How do I reach you? GitHub Pages hosting is configured with custom domain — zero recurring cost, enterprise-grade security.

Phase 4: "Final Tweaks & Handover" — Week 5 (June 29–July 5)

Dedicated "ping-pong" feedback cycles for precision adjustments. All final files delivered in print and digital formats. Full technical handover: GitHub repository access, source code, and documentation. Guillermo walks away owning 100% of the infrastructure — no vendor lock-in, no recurring fees, no dependency on us to keep the lights on.

05. /investment

Pricing follows value. This section frames cost as an investment against the ROI case built above.

What is included:

Brand Strategy & Naming

Research and creative direction (Phase 1):

- Strategic naming research
- Brand identity & voice development
- 2 distinct brand directions for your strategic choice

Full Brand Identity Kit

Visual system and guidelines (Phase 2):

- Professional logo suite (primary, secondary, variations)
- Premium color palette & typography system
- Comprehensive brand guidelines document

High-Performance Website

Custom engineering and deployment (Phase 3):

- Fully coded HTML5/CSS3/JS high-performance site
- SEO-optimized architecture and content strategy
- Responsive UI/UX design system

Zero-Cost Cloud Hosting

Technical infrastructure (Phase 3):

- Secure GitHub Pages hosting setup
- Custom domain integration
- 0€ recurring monthly maintenance fees

Digital Brand Assets

Professional touchpoints (Phase 3):

- Business card designs for the founding team
- Custom LinkedIn brand banners
- Professional email signatures
- **Special offer:** Included in the price

Technical Handover

Final delivery and ownership (Phase 4):

- Full source code delivery & GitHub repository access
- Print and digital file packages for all assets
- 100% intellectual property ownership

Payment Structure:

Milestone-based, split equally across three triggers: project start, core deliverable completion, and final approval. No hidden fees, no ongoing subscriptions, no hosting costs.
